Year of Publication: 2008

Pages: 142

ISBN: 978849589561

Genre: Literature

AUTUMN

2009

Season: AUTUMN 2009

All those who have enjoyed Maths now feel obliged to make others enjoy it as well. Study plans, educational methods and textbooks propose a systematic and direct perspective of this discipline, but Maths is actually more than arithmetic operations or geometric figures.

Aventuras matemáticas: en busca del código secreto insists on this other side of Mathematics.

The author, apart from focusing on the practical use of Maths, insists that it is the main tool to develop our intellectual potential. This book offers us the magic chance to think, seduces our curiosity and challenges our mind.
